

PurelyPeer

Features

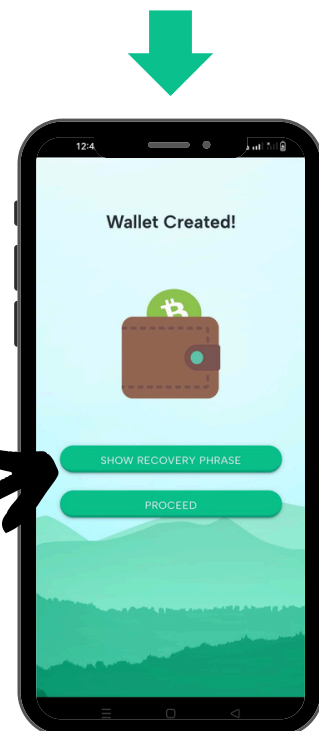

1.0 Wallet Creation

When users open the app for the first time, they are asked to select their language and introduced to PurelyPeer, its purpose, and key features

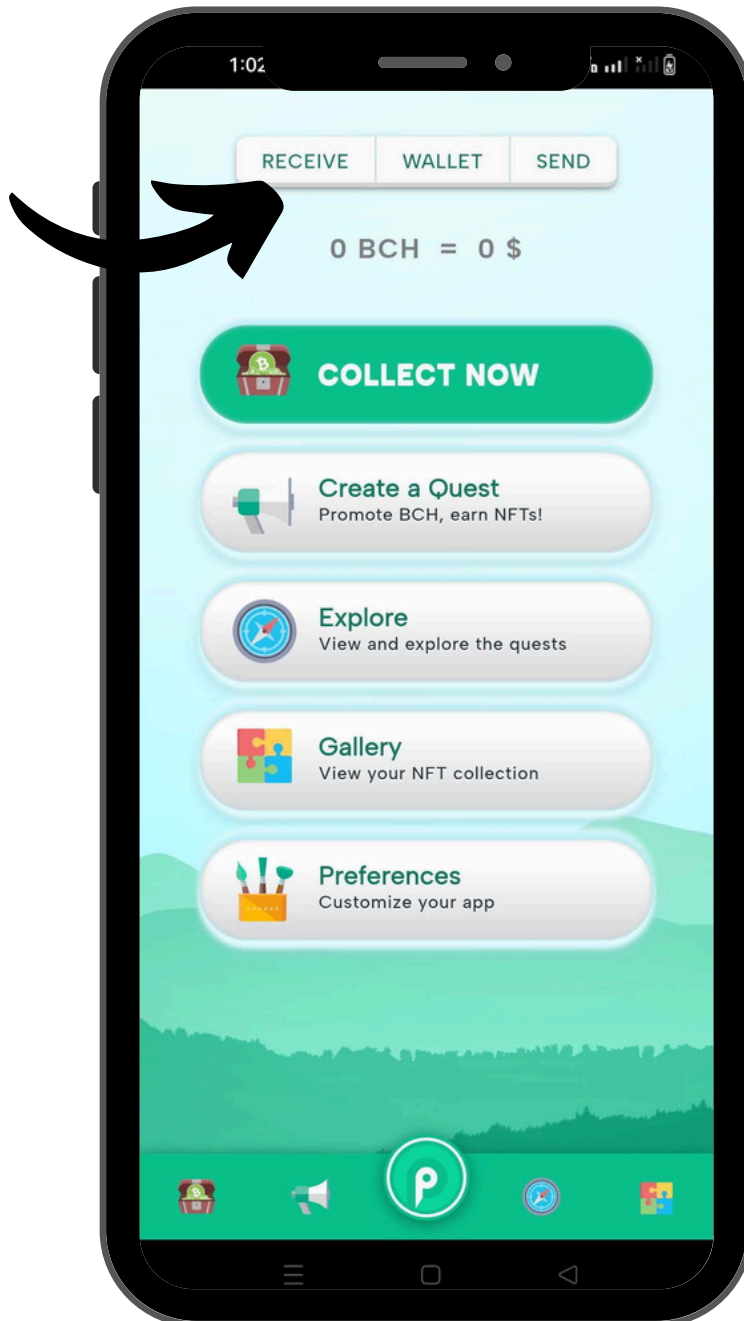

A BCH (Bitcoin Cash) wallet is automatically created, allowing users to send, receive, and manage funds and NFTs within the app.

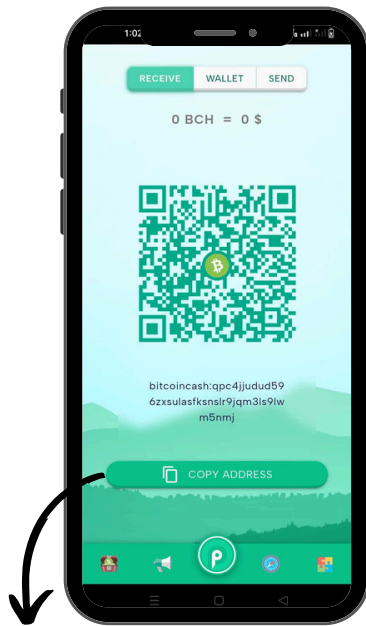

For security, the wallet's backup is protected by a **recovery phrase**, which only the user can access.

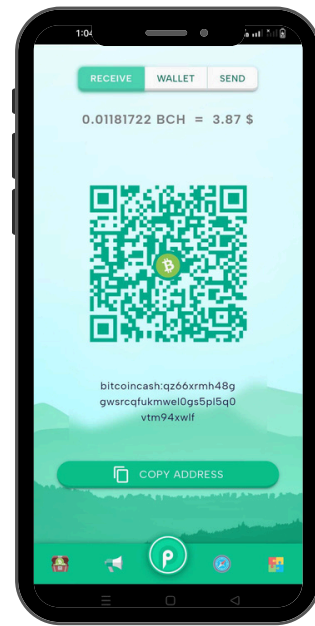

2.0 Receive BitcoinCash

After creating a wallet, the next step might be knowing how to receive some Bitcoin Cash.

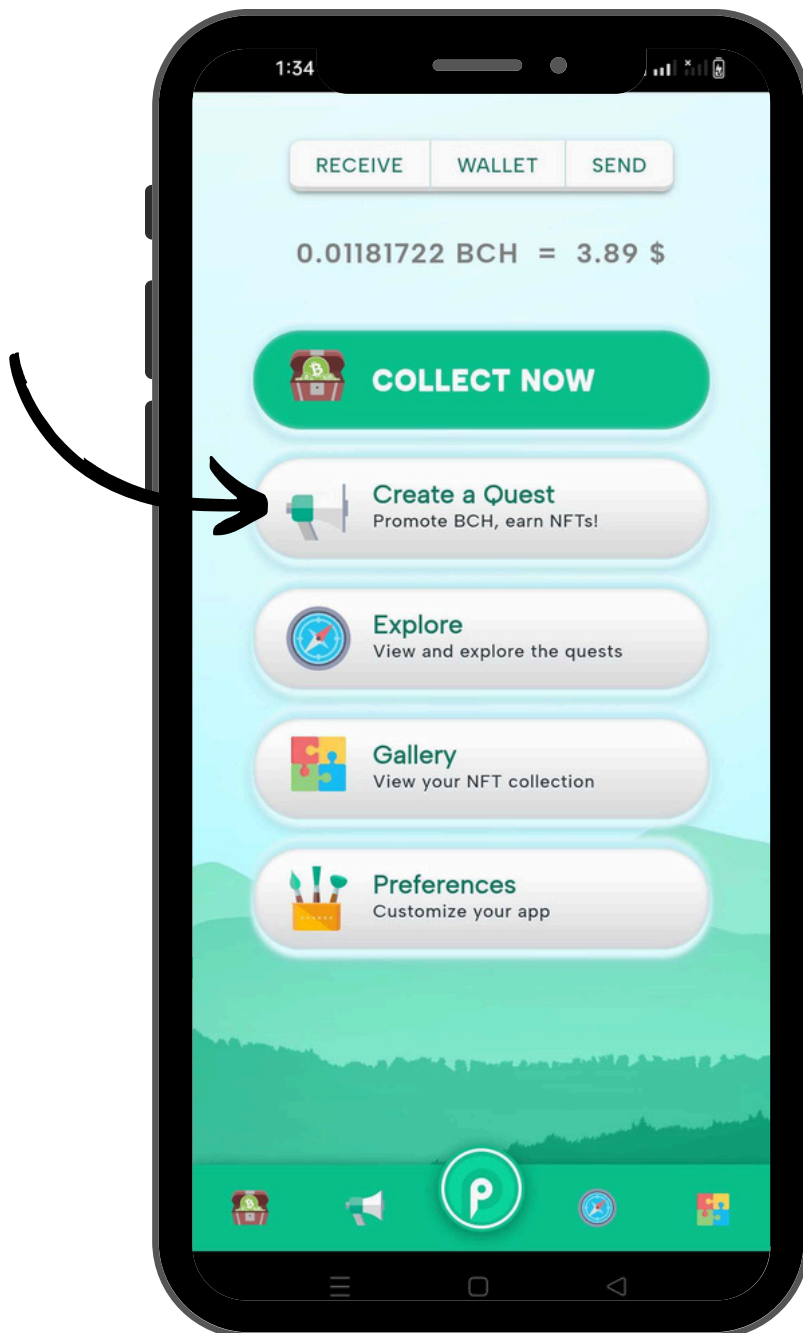

2.1 To receive Bitcoin Cash, scan the QR code using another wallet or copy the address.

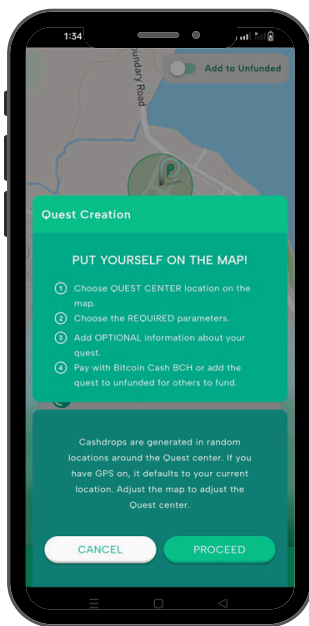

2.2 The wallet balance updates once it receives the BCH. The receiving wallet address also updates for security purposes.

3.0 Create a Quest

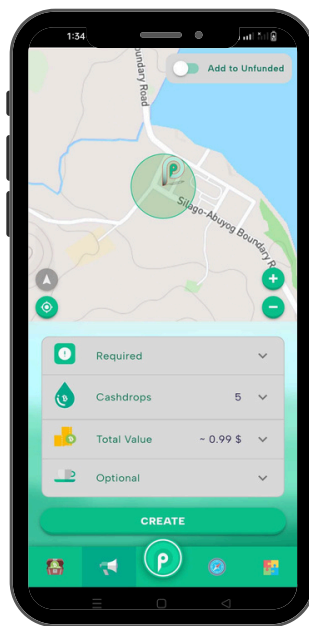

Now that some Bitcoin Cash is in the wallet, the next question is, "How can this Bitcoin Cash be used?" One way is by creating a Quest.

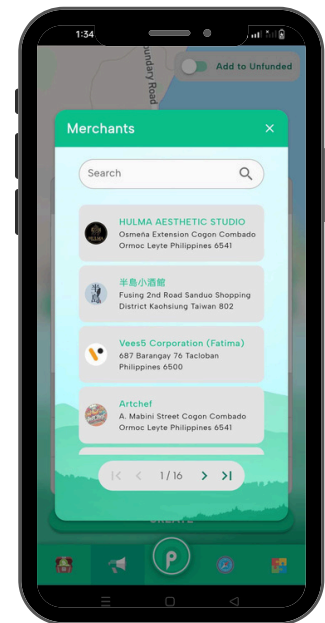

This feature allows users design Quests, promote businesses, and distribute rewards (also called cashdrops).

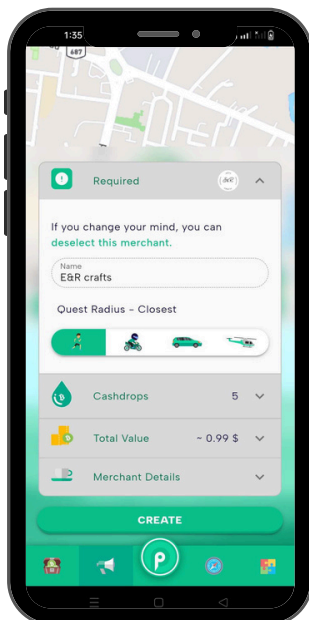

3.1 A note appears during the initial page load.

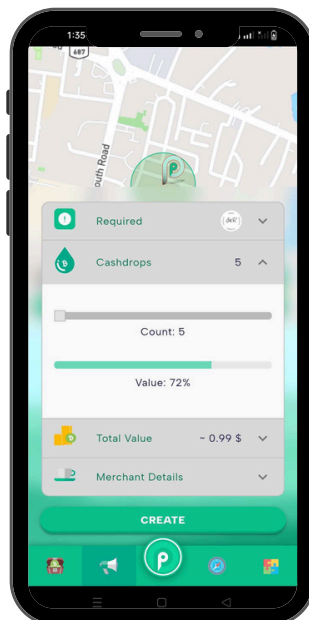

3.2 After clicking the proceed button, the form to create a quest will appear.

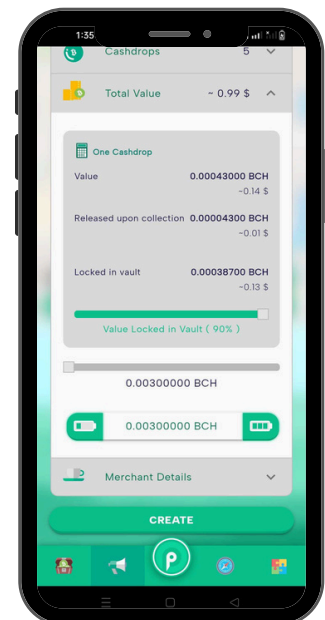

3.3 You can **make this a merchant quest** after selecting a merchant from the *Required* section.

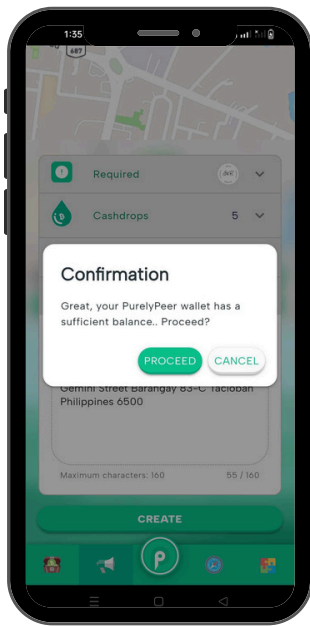

3.4 After selecting a merchant, the other fields will be automatically populated.

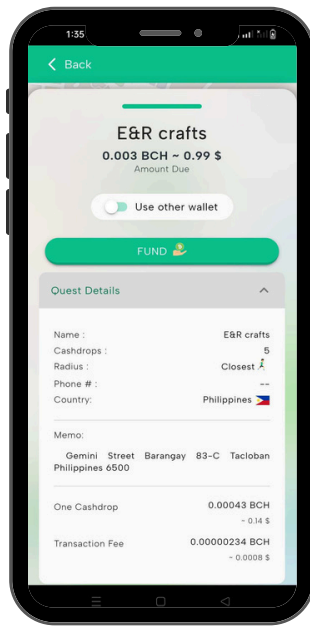

3.5 The Cashdrops section helps determine how many cashdrops can be included in the Quest.

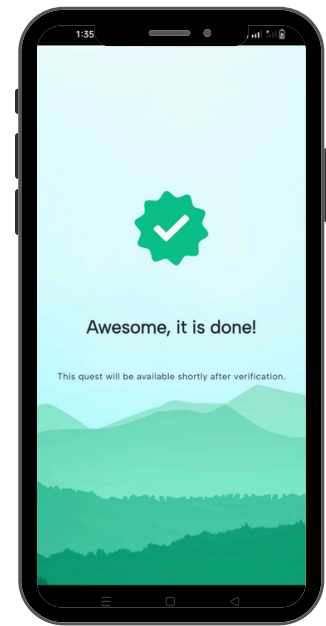

3.6 The Total Value section provides an overview of the overall value of the Quest/ Cashdrop.

3.7 If there is enough balance, the app will notify before proceeding to payment confirmation.

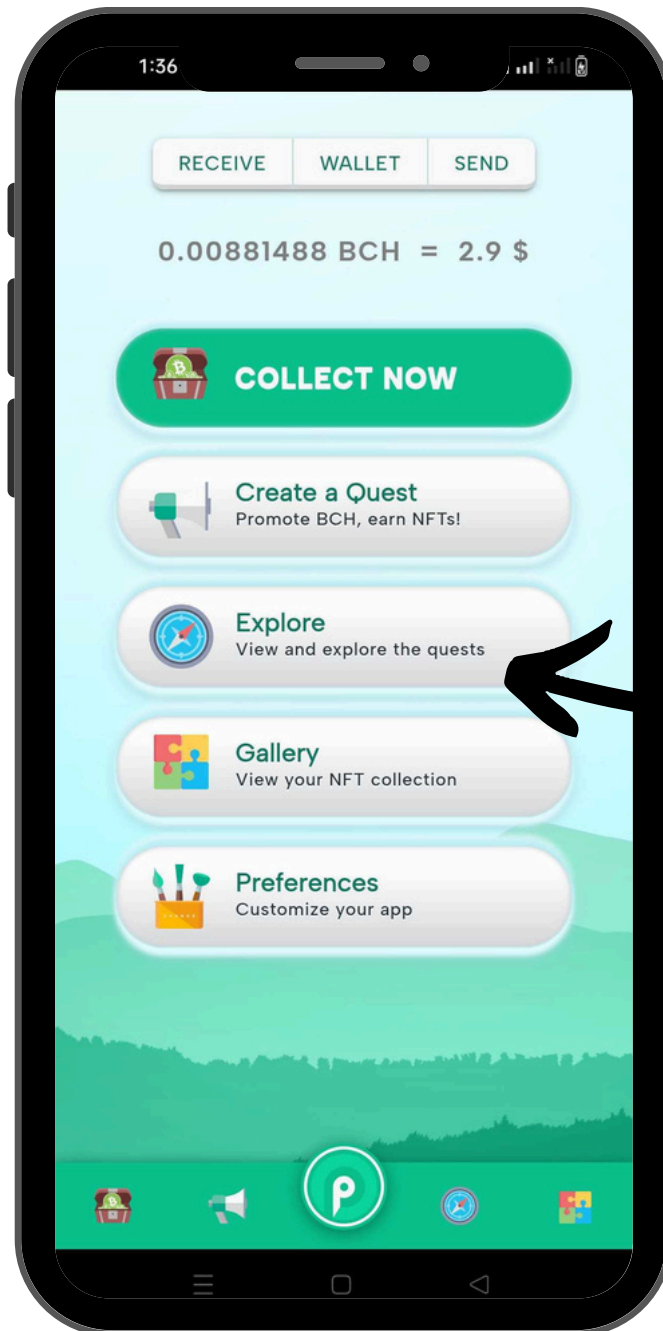

3.8 The payment confirmation ensures that all Quest details are correct before proceeding with payment.

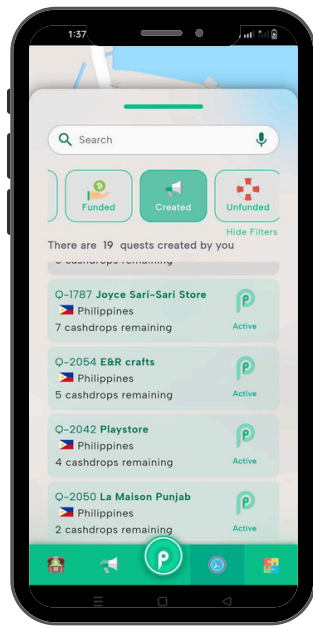

3.9 A success page appears after confirmation.

4.0 Explore Mode

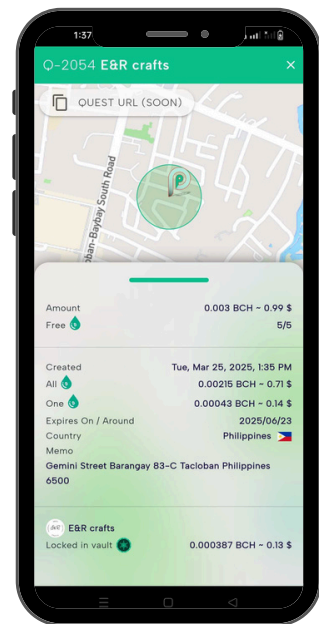

After creating a Quest, checking its status and seeing it in action might be of interest. To do so, simply click this button.

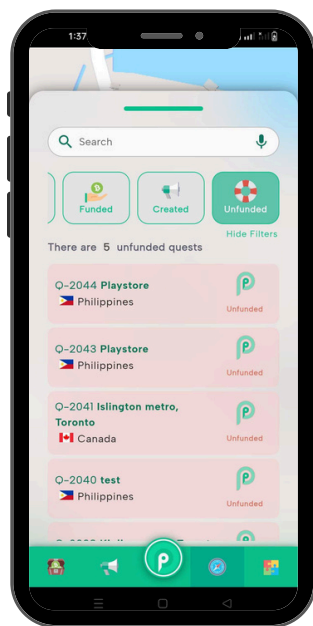

Explore Mode helps users discover the Quests in the app.

4.1 The Explore page includes multiple filters. To view the created Quest, filter by *Created*.

4.2 After clicking the Quest name from the list, its details will appear along with its exact location on the map.

4.3 Unfunded quests can also be filtered from the Explore page. Note that quests become unfunded after switching this.

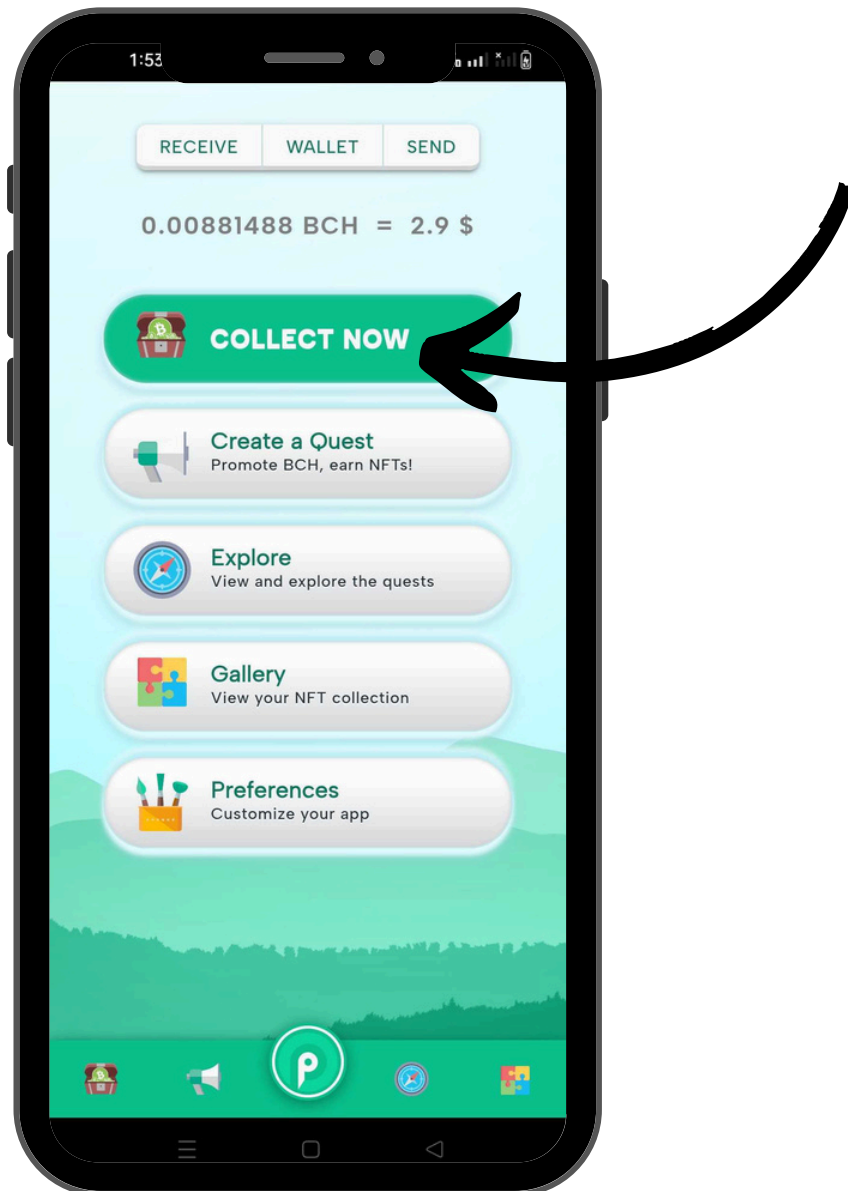

4.4 If funding the Quest is chosen, a confirmation page will appear. If the balance is insufficient, a QR code will be displayed to seek assistance from another wallet.

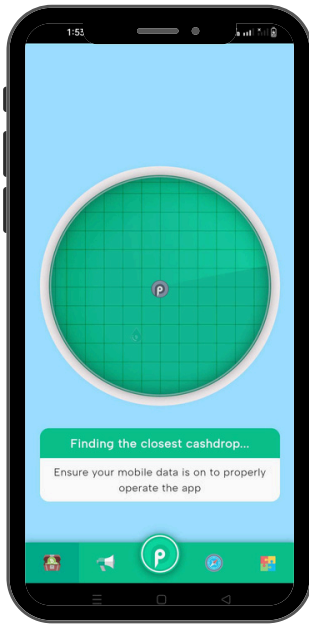

See 3.2

5.0 Collect

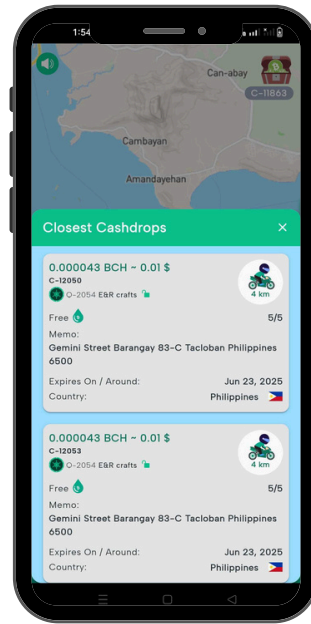

The main attraction of the app is the Collect page, where hidden Cashdrops can be found within the Quest radius. See 3.0

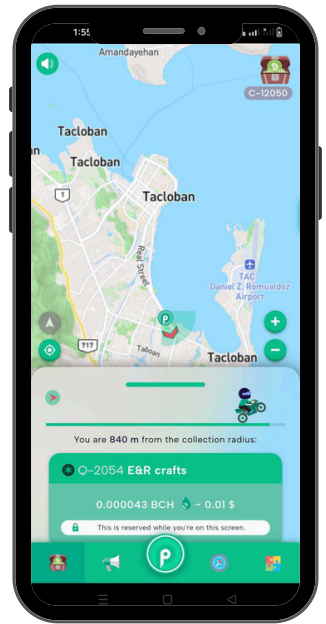

Collect Mode is where users look for and collect cashdrops in real-world locations.

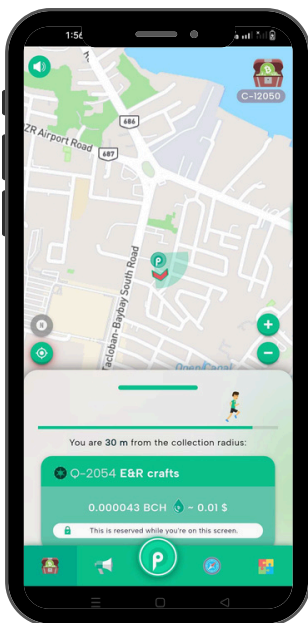

5.1 During the initial page load, the app uses the current location to find the nearest available Cashdrop.

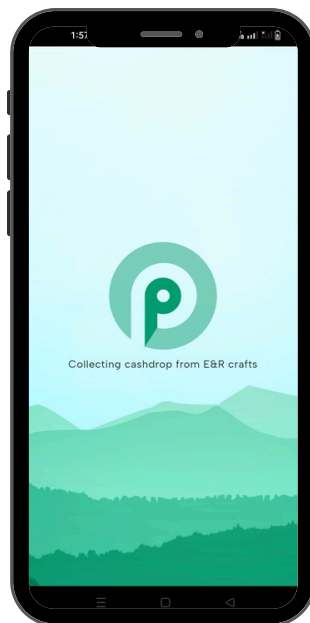

5.2 A list of other nearby Cashdrops appears after clicking this icon. 

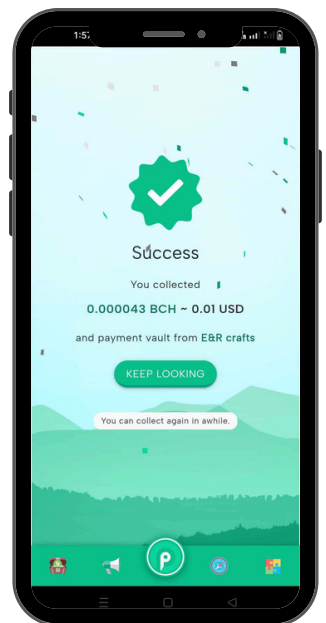

5.3 Cashdrop information, including value, directions, and distance, is provided.

5.4 As the user approaches the Cashdrop, the icon changes from a motorcycle to a running man.

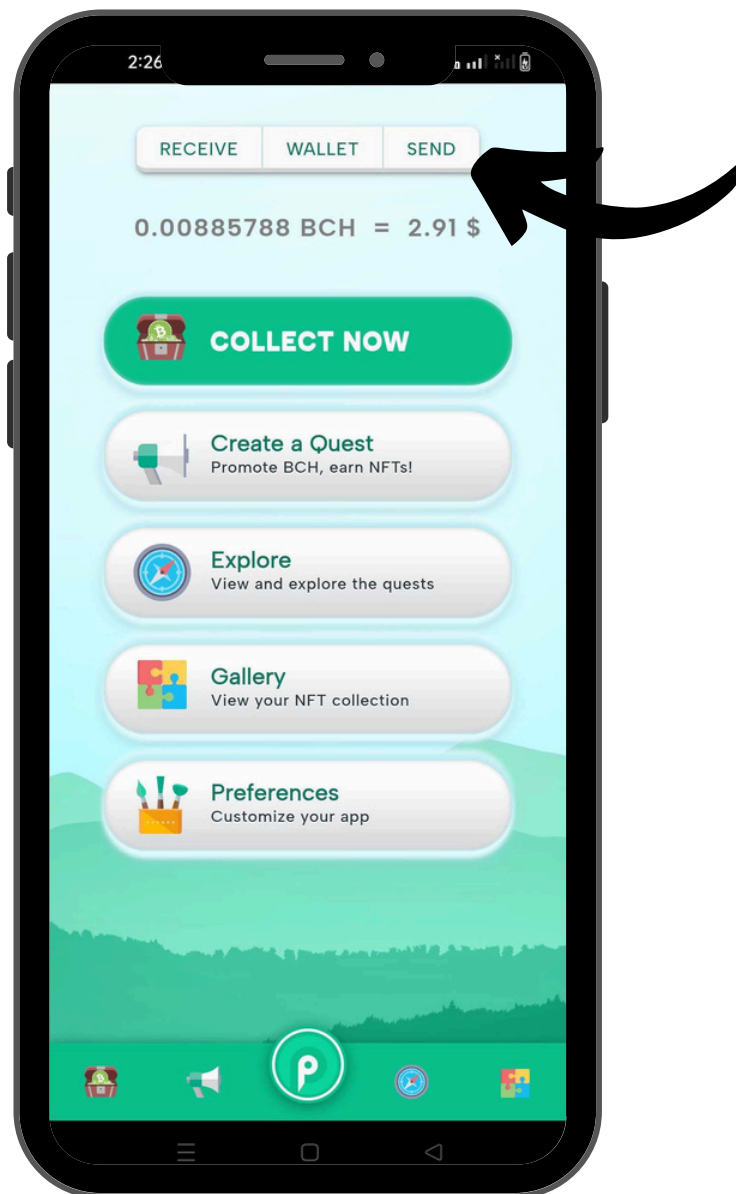

5.5 Once the user reaches the exact Cashdrop coordinates, the collection process begins.

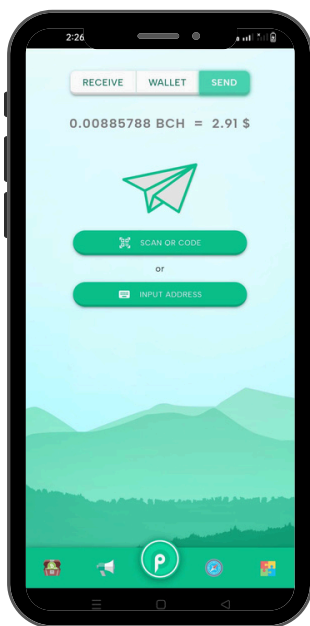

5.6 Bitcoin Cash and NFT rewards will be transferred to the wallet.

6.0 Sending BitcoinCash

Now that a Bitcoin Cash reward has been collected, the next step might be figuring out how to send it to another wallet.

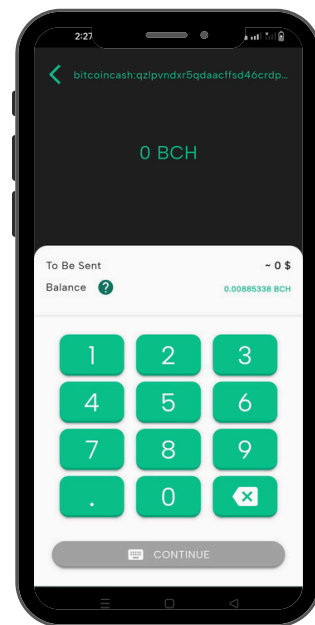

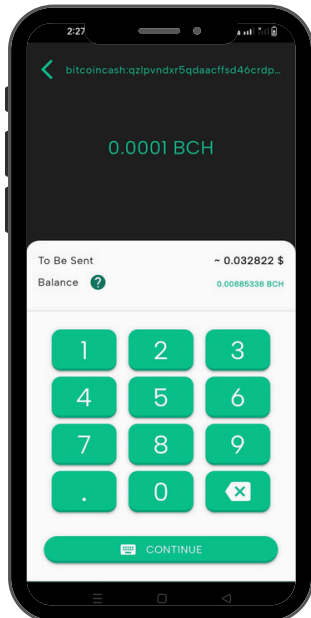

6.1 There are two ways to send Bitcoin Cash: scan the QR code from another wallet or manually enter the Bitcoin Cash address.

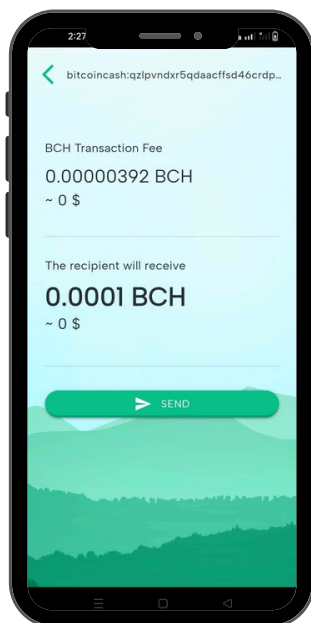

6.2 The simplest method is to scan the QR code from another wallet.

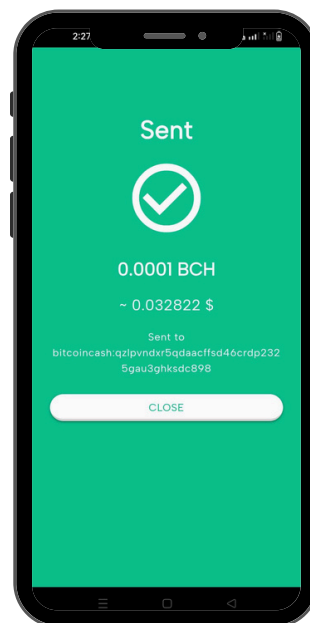

6.3 After scanning, enter the preferred amount to send.

6.4 Click *Continue* to proceed with sending the amount.

6.5 A confirmation page will appear before the amount is sent.

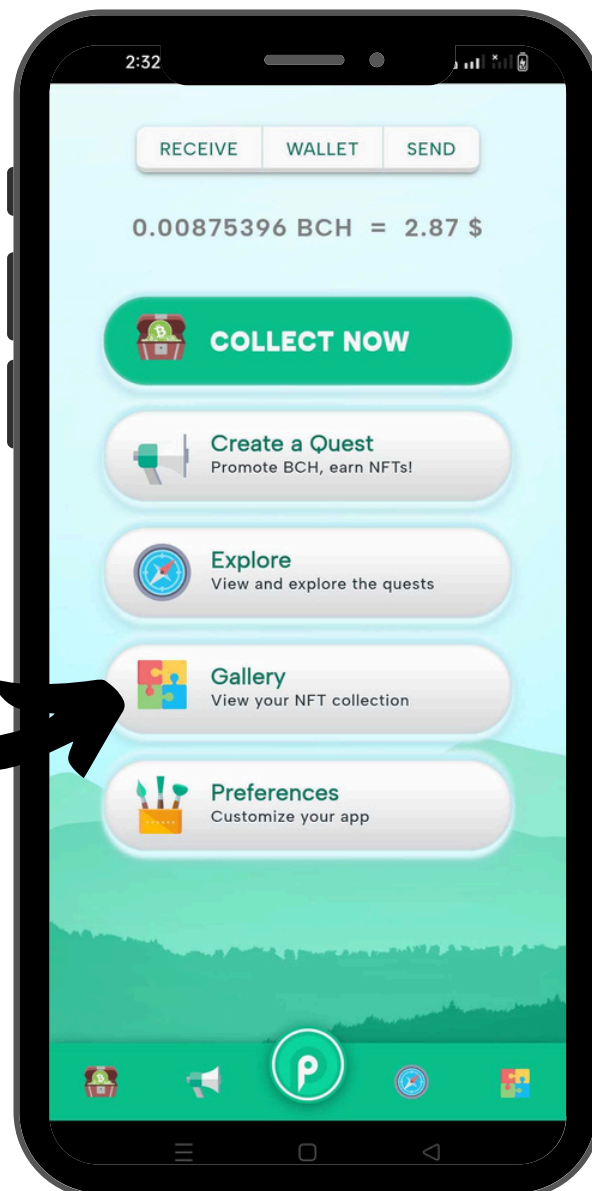

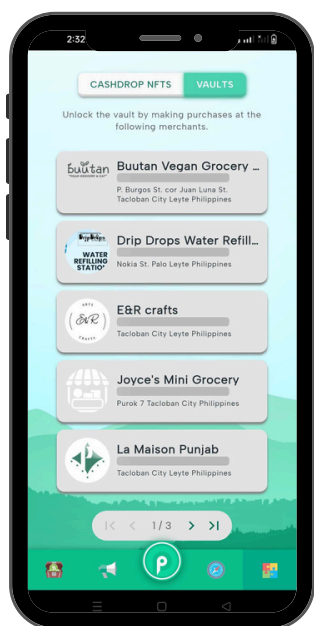

6.6 A success page will appear once the funds have been transferred.

7.0 Gallery

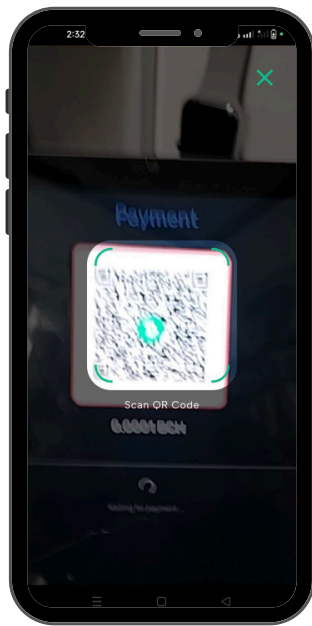

Aside from sending Bitcoin Cash, NFTs and Vaults can also be used for payments and transactions with other wallets.

NFTs and Vaults can be viewed in the Gallery.

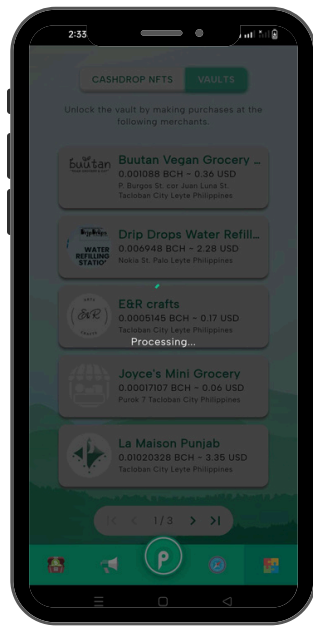

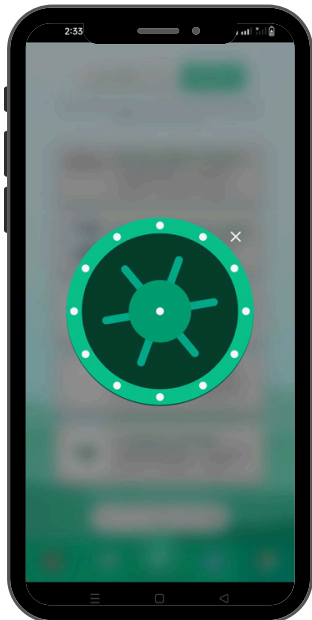

7.1 If Cashdrops with Vaults were collected (see 5.6), similar items will appear in the Gallery.

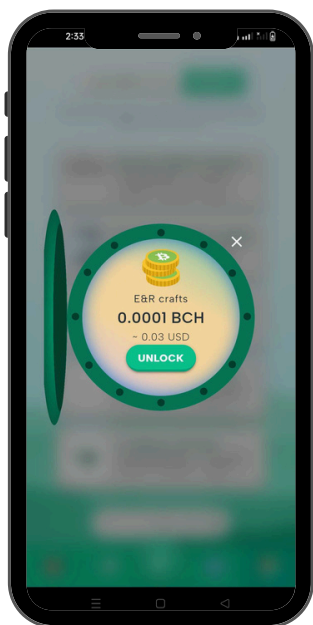

7.2 Simply visit the merchant and scan the QR code.

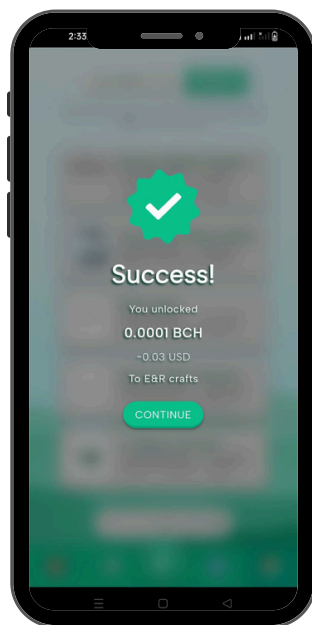

7.3 The app will process the QR code data.

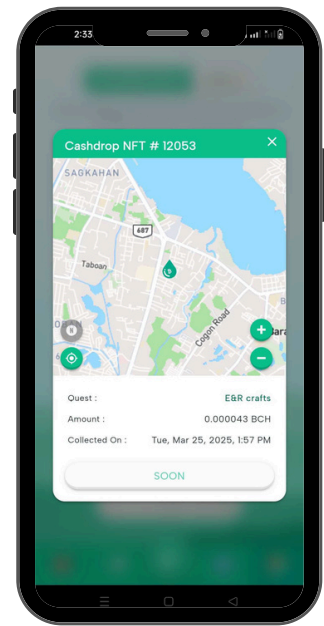

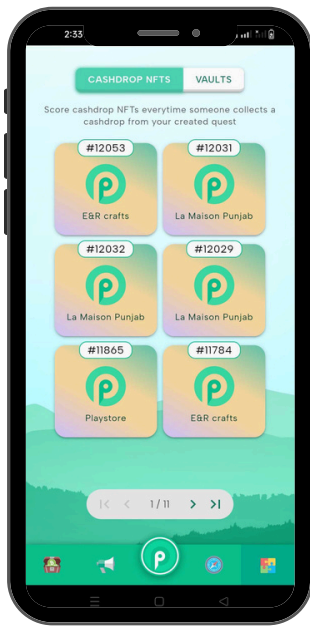

7.4 If the QR data is valid, the Vault will open.

7.5 The amount will be unlocked.

7.6 After unlocking, a success page will appear.

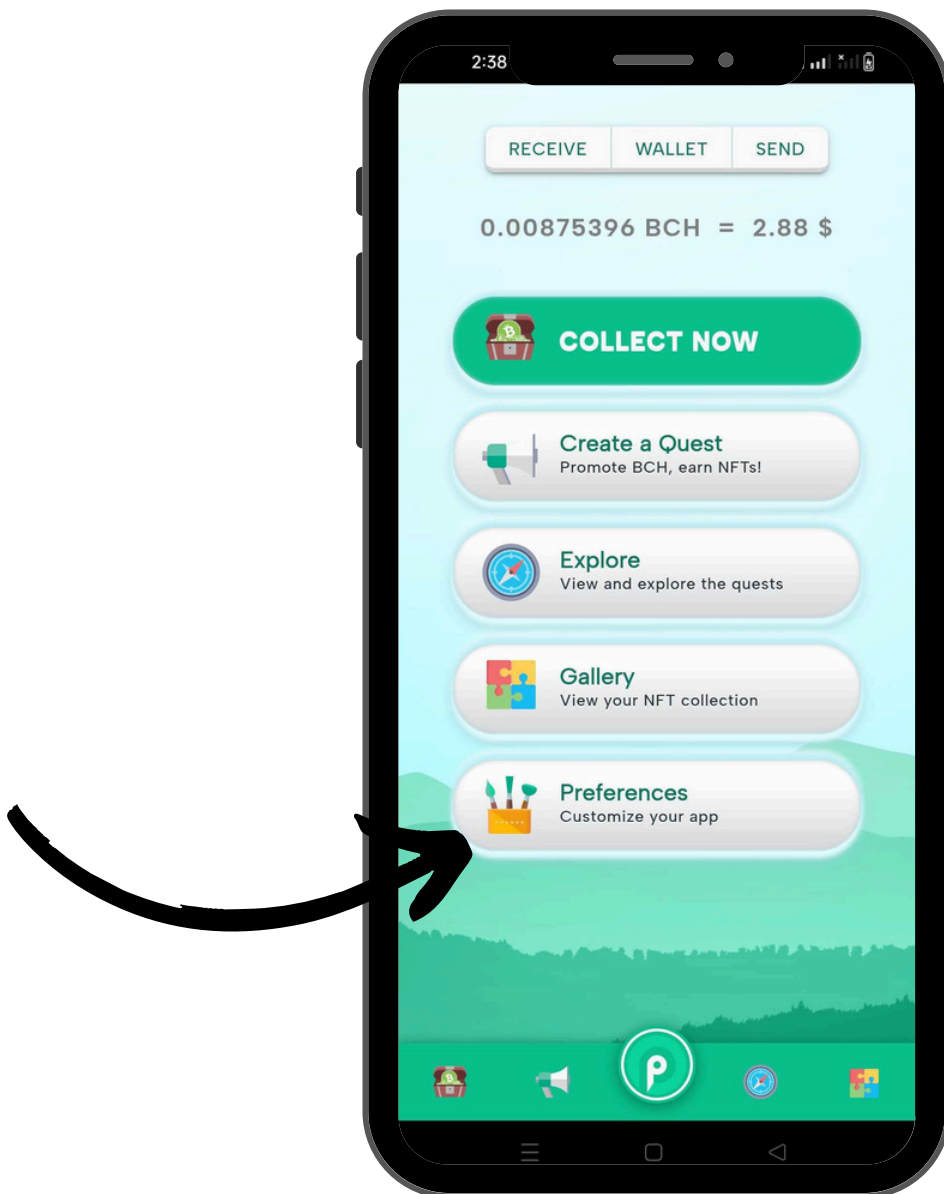

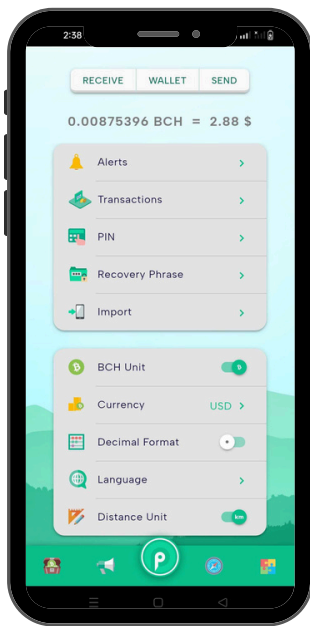

7.7 Cashdrop NFTs can also be found in the Gallery, awarded to users who create or fund Quests.

7.8 This Cashdrop NFT will soon be used in exciting new app features.

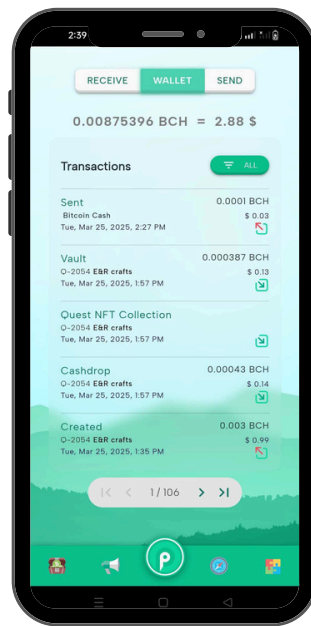

8.0 Preferences

Ultimately, the app can be customized by simply navigating to Preferences.

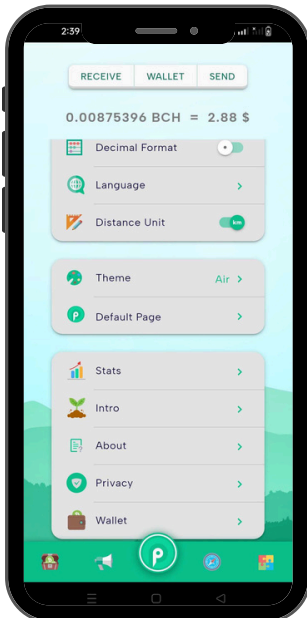

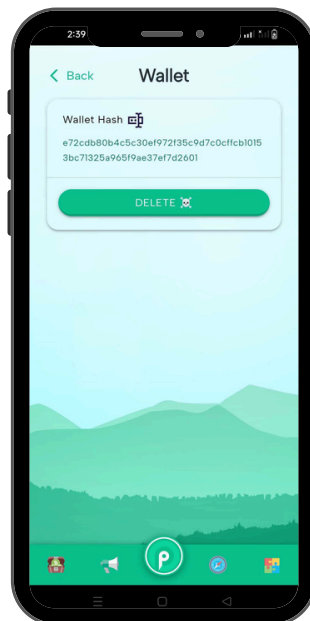

8.1 The Preferences section offers a variety of options to explore.

8.2 For example, transaction history can be viewed.

8.3 By selecting Wallet from the options at the bottom.

8.4 The wallet can also be deleted.
